

# Electrolyte etching unit CEL-01

Clear image becomes visible immediately  
Without aggressive chemicals and toxic wastes

**Voltage adjustment function**  
CEL-01 can adjust voltage ranges depending on what material and type you use.

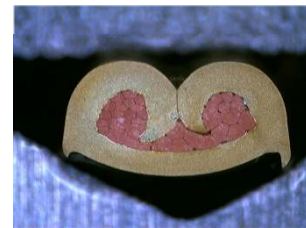

**Only a short time for etching process**  
The etching process will be completed in about 10 seconds after applying etching solution.

Before

After

The most striking feature of this product is the safety of the solution you used. It contains no deleterious substances in it. Therefore operators can safely perform the etching process. Touching the solution with operators' hands causes no problem. And you don't need to find another workplace and storage room for it. Its finished quality is almost as good as that in the case of nitric acid.

## CEL-01 Specifications

Model name	Electrolyte etching unit CEL-01
Voltage range	AC5 to 17V
Power source	AC100 to 240V (50/60Hz)
Available wire size	AWG30 or bigger
Dimension	W150×H150×D50
Solution detail	Refer to enclosed MSDS
Weight	900g
